

## **2016 Pallet Survey Raw Data**

*File: 2016 Pallet Survey Raw Data.csv*

The 2016 Pallet Survey Raw Data file contains all the raw data collected for the paper. Data for each question are separated from data from other questions by a green column. Question ordering is in numerical order from how it was asked on the survey questionnaire. Question 1 is skipped because it was a screening question to ensure the responses are from firms in the industry. Information on the question subject is given in the cells to the right of the question.

The columns labeled "ID" contain the IDs for each respondent. Respondents did not all answer the same questions, so the values in the ID column may differ among questions (i.e. ID #0015 answered Questions 2 and 3, whereas ID #0027 answered Question 2 and did not answer Question 3). The region column contains which region the data point is from. Some respondents had facilities in multiple regions and thus have 2 or more cells in the ID column, but with different regions. Any entry of "x" is a response that could not be interpreted or was not given, and is the same as a blank cell. Any blank cells are non-responses to the question.

## **2016 Pallet Survey Data Manipulations**

*File: 2016 Pallet Survey Data Calculations.csv*

This file contains the manipulated data and the calculations performed to the data. Calculations for each question are separated by a green column. Within the calculations for each question, the leftmost cells are the raw data used for the calculations while the rightmost cells contain the more processed data.
